SydneyKit.com

### Overall

This project will consist of 4 murals - one dedicated to depicting the hours of operation, two dedicated to a board in the parking lot, and one dedicated to covering up the trash cans.

The project's murals and construction will be completed by Sydney Kit and the community.

This proposal sheet will explain each mural and the construction of each. Detailed images of the murals will be completed after this proposal is accepted.

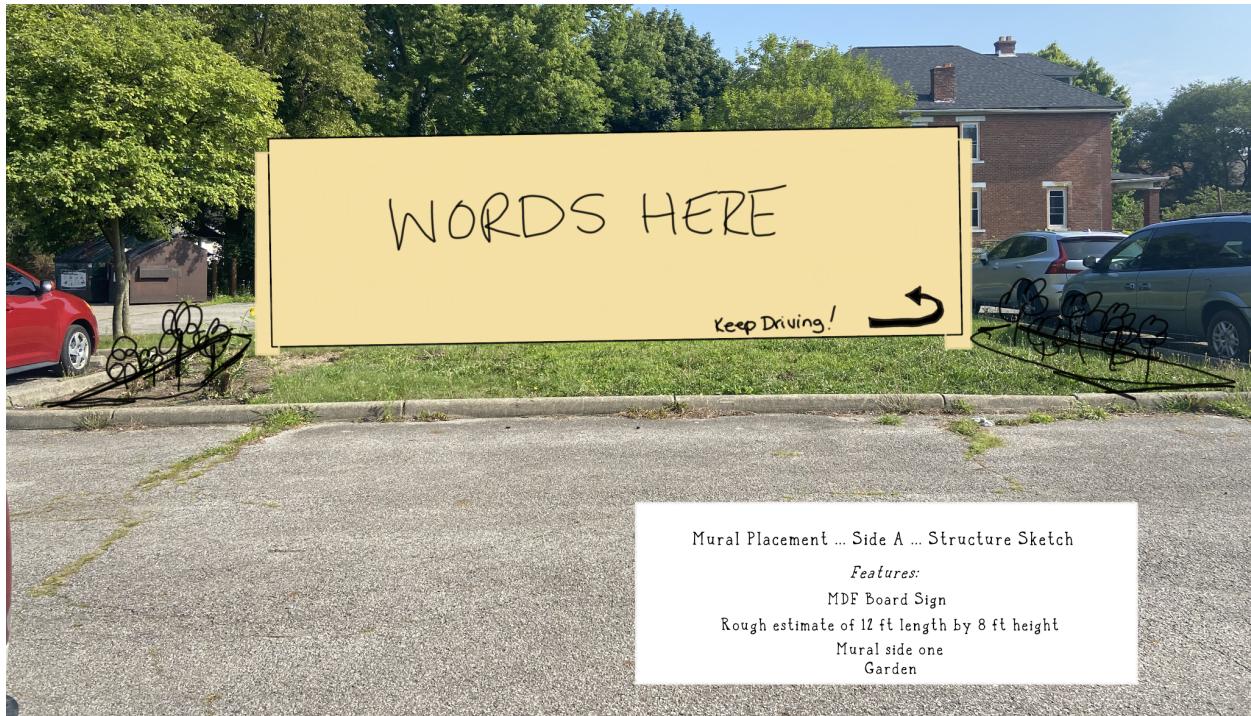

## Hours of Operation Mural

The Hours of Operation Mural will be completed on the street-facing side of the brick building that hosts the old boiler systems. It features the kitchen's name, the hours of operation, and a mural of plentiful food below it.

The hours of operation bar will be a solid color that hosts the current hours of operation. The purpose of the solid bar is for easy updating. If we were to add the hours of operation as individual letters and numbers, changing the hours would be noticed. Adding that solid bar allows an easy update system.

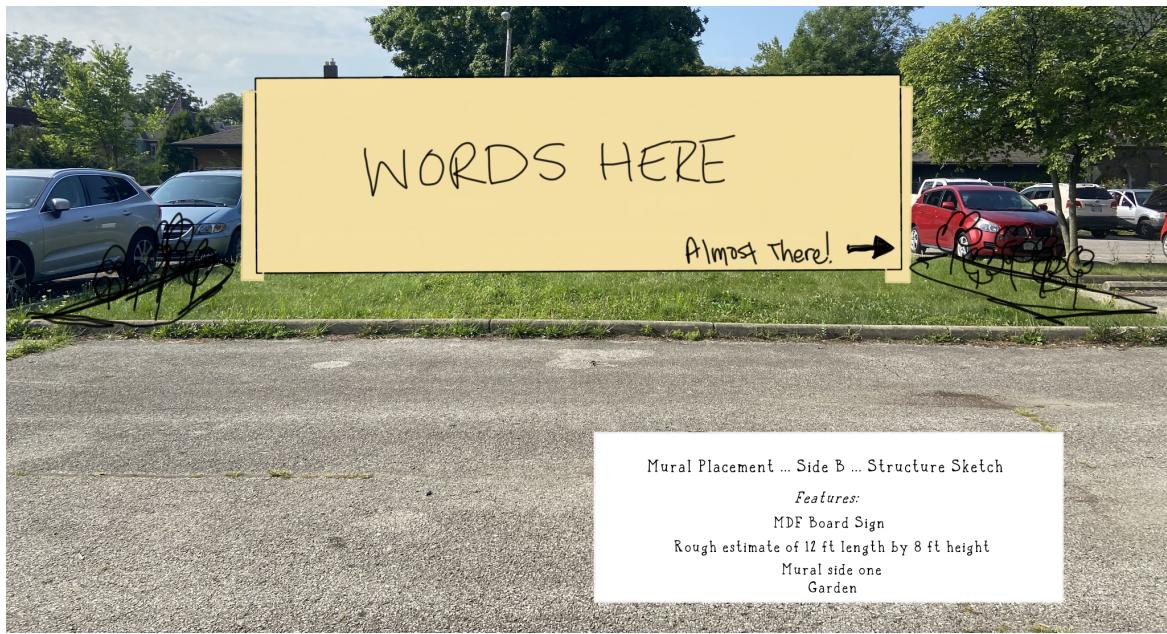

## Parking Lot Mural

The parking lot mural will consist of a constructed wood structure. The wood would be made of MDF and would be approximately 12 feet long by 8 feet tall.

Two murals will be completed - one on each side.

As an addition, there will be two gardens added on the two sides of the board.

## Trash Bin Mural

Trash Can Concealer...Sketch

*Features:*

MDF Board with Two Sides  
On Wheels  
Murals

The trash bin mural will consist of half a box on wheels. The purpose of this structure is to hide the trash bins from the incoming traffic while being easily movable for the trash collection companies.

## **Assembly**

Since murals take a long time to complete, I propose a “Community Day” where we invite members of the parish and the community to help create these murals.

Prior to the community day, the boards will be constructed and installed. The murals will be outlined on the selected surfaces, ready to be colored in.

During the community day, members of the parish and community will be given supplies, such as paint and paint brushes, to fill in the murals. Along with the murals, plants and seeds will be planted in the gardens in the parking lot mural.

After the community day, Sydney Kit will come back and re-outline the mural where it is needed.

## **Labor / Cost**

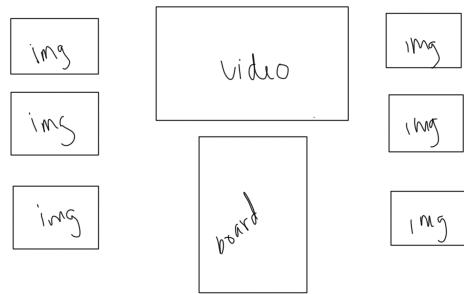

I propose, if this project is not one that needs to be completed right away and I can get verification from my professor, that this be a project to be considered for my senior seminar class.

What this entails is throughout the semester, I will get feedback and critiques on the proposed murals both from classmates and from your community. During August, September, and early October I will be preparing the boards and digitally creating the murals.

I propose that the community day be in the middle to late October, depending on the weather. This would give us enough time to market the event to the parish and osu communities.

If I am allowed to do this for my class, I would be able to include it in my senior gallery show. What I would do is create a promotional video of the Community Day / the preparation of the event that would be displayed in the gallery. I would also have an extra piece of wood that I would ask those participating in the event, and, if allowed, those who receive food to respond to the prompt "how has this food kitchen helped you?" At the gallery I would also ask viewers to donate to the kitchen via a donation link.

Rough Gallery Setup

As for cost, if I can use this as a school project, I will ask for no labor cost, just supplies. Supplies would consist of the boards, paint, paint brushes, and garden seeds. During September and early October, we can promote this event and ask for donations of materials or money.

If this project cannot be used for my class, or it needs to be completed earlier, I will submit a labor cost estimate.
